SPC Explained

How to read SPC charts

Statistical Process Control (SPC) charts help show how a process or measure changes over time, and highlight results that may need further attention.

Because data will naturally vary, SPC helps distinguish normal variation from more meaningful change. These charts look similar to standard line charts, but also include additional elements.

Centre line = mean (average)
Upper and lower control limits = the range within which values would usually be expected to fall
Arrow in the top-left = whether increasing values are good, decreasing values are good, or whether neither applies

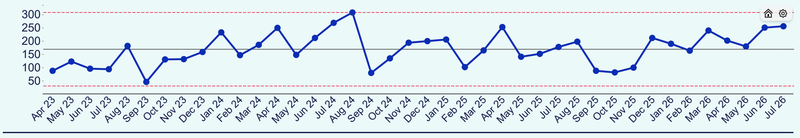

These help to show whether a result is within the expected range or may need further investigation.

Some data in this report is not suitable for SPC, for example where values follow a continuous trend over time. In these cases, the mean and control limits have been removed, and the chart should be read in the same way as a standard line chart.

Report Overview

SEND and CYP related data for Suffolk and Waveney (where available).

Data relates to areas of identification and advice requests as well as waiting times for assessment and treatment for mental health and community services.

The data is taken from a variety of sources including NHS Digital, Suffolk County Council, Norfolk & Suffolk NHS Foundation Trust, Suffolk Community Services, Suffolk & North East Essex ICB and Norfolk & Waveney ICB.

Navigating the Report

Interactive buttons in the header of each tab allow you to navigate to different screens of the report, or clear the filters on the current page.

The data in the report is interactive - if you select a particular area the other charts will update to reflect the selected field, deselecting or clicking on the clear filters button will revert the page to the default view. Select multiple areas by holding down ctrl and clicking on each area.

Data in the report can also be filtered using the available drop down filters on the page, or if the filter pane (to the right) is in use, additional filters can be found there.

If you have any queries please contact the team email address below, and your query will be routed to the appropriate team member.

Information Governance Notes

Under The Data Protection Act 2018 S.171(1) - It is an offence for a person to knowingly or recklessly re-identify information that is de-identified personal data without the consent of the controller responsible for de-identifying the personal data.

This report could contain potentially identifiable factors that could be deemed as special category data (sensitive data) and therefore it is not permissible to share outside the relevant departments/organisations. Not following this is a breach of the DPA 2018 S.171 (1) above, and risks the ceasing of this data flow from NHS Digital as it will be seen as a breach of the contract the CCG has with NHS Digital (NHSX). Access to Power BI reports is monitored for auditing purposes and your access may be removed if necessary.

Suffolk (SNEE) Dynamic support register (DSR) RAG ratings

Waveney Dynamic support register (DSR) RAG ratings

In April 2023 the Cheshire and Wirral's risk stratification tool: the Children and Young People Dynamic Support Database Clinical Support Tool (CYP DSD-CST), was introduced as part of the DSR review. This led to some CYP's RAG ratings changing and subsequently the number of those rated red increased.

Suffolk Tier 4 & TCP admissions

Waveney Tier 4 & TCP admissions

Suffolk TCP admissions:

- Since the inception of the DSR, 2 CYP have been re-referred for further review.
- Of the 2 TCP Tier 4 admissions, 1 followed the Blue Light protocol due to the level of risk and the need for urgent action. 1 was diagnosed whilst an inpatient.
- Both CYP were not previously known to the CYP DSR at the point of escalation. Once identified, they were immediately registered.
- For the individual known prior to admission, they were offered a comprehensive community support package in an attempt to avoid admission.
- Following admission, in-reach from community services was provided to ensure that each CYP's length of stay was clinically appropriate and kept to a minimum.
